

Digital Signature Certificates for MCA21 for Individual or Companies

Digital Signature Certificates

- One Year Validity + USB Crypto token
- Two Year Validity + USB Crypto token

SPUDWEB

About MCA21

For security reasons, your Digital Certificate should be stored on a hardware device, such as a Cryptographic USB Token. A USB Token stores your unique Digital Identity (your Private Key) securely and ensures that nobody else has access to it. You simply need to plug the token into the USB port of your computer, and perform your signing operations.

MCA21 With MCA21, all transactions with every Registrar of Companies will be through e-filing using Digital Signature Certificates (DSCs) on the MCA21 portal. To make this e-filing easier for you, SafeScript - the pioneer and leader in digital certificates - brings you MCACert.

What is MCACert ? MCACert is a DSC that is the equivalent of a digital identity, which helps to uniquely identify you to the MCA21 portal on the Internet. A Digital Signature is to an electronic form what a hand-written signature is to a paper form.

For security reasons, your MCACert should be stored on a hardware device, such as a Cryptographic USB Token. You simply need to plug the token into the USB part of your computer and perform your signing operation.
